NON-COMBUSTIBLE

Our high-definition Burncrete™, a patented non-combustible casting formulation, authentically replicates the rich wood grain and character details of antique wood.

INSPIRATION

Our mantels are molded directly from antique timbers that are salvaged from historic barns, farms, homes and cabins across the Bluegrass region.

CRAFTSMANSHIP

Each Lexington Hearth mantel is meticulously hand-painted, by incredible coloring artists, to capture the natural weathered character and color nuances acquired with exposure to the elements over time. The end result is an authentic recreation of an antique mantel suitable for fireplace designs requiring non-combustible materials.

COLORS

Weathered Grey : The natural grey color that untreated wood develops when exposed to the elements.

Pale Honey : The golden color of aged whiskey after a few years in the barrel.

Maduro : The dark brown wrapper of a good cigar.
